MyYangaX - Staging Handoff

Date: 2026-08-05 - **semver:** 5.0.0 - **Release:** MyYangaX (Lovable Virtual Wear UI)

What's new

- Lovable-style Virtual Wear stage machine (landing -> questionnaire -> loading -> results)
- Client-side curateVwLooks() from paid brand pool (no curate-looks edge)
- Selfie moderation + selfiePath fix through virtual-tryon
- Hostile audit mock tier: **38/38 PASS**

See docs/VIRTUAL-WEAR-LOVABLE-UI.md for full assessment.

Quick start (local QA)

```
unzip -o ~/Downloads/MyYangaX.zip -d MyYangaX
cd MyYangaX
npm install
cp .env.example .env   # edit VITE_* vars
npm run dev
```

Without cloud Supabase:

```
npm run supabase-tester:start
npm run dev:tester
```

Deploy to AWS Amplify

- **Environment** - Copy .env.example -> .env. Set VITE_SUPABASE_URL, VITE_SUPABASE_ANON_KEY, PUBLIC_APP_URL (Amplify domain).
- **Build** - npm run build (output: dist/).
- **Amplify settings** - Build command: npm run build; output directory: dist; add all VITE_* vars at build time.
- **SPA routing** - Redirect /* -> /index.html (200).
- **Supabase edge** - supabase link, npm run sb:deploy, supabase db push.
- **Secrets** - Set edge secrets per docs/AWS_SECRETS_RUNBOOK.md (Replicate, Gemini, WhatsApp, payments).
- **Smoke test** - npm run audit:hostile:mock-only locally; npm run audit:hostile:live against deployed URL.

Full restage steps: docs/AWS_RESTAGE.md.

Pre-ship audit

```
node scripts/hostile-audit.mjs --mock-only --skip-install --force-mock
```

Expected: **VERDICT: PASS** (Tier 1 + Tier 2).
