MyYanga Business Plan

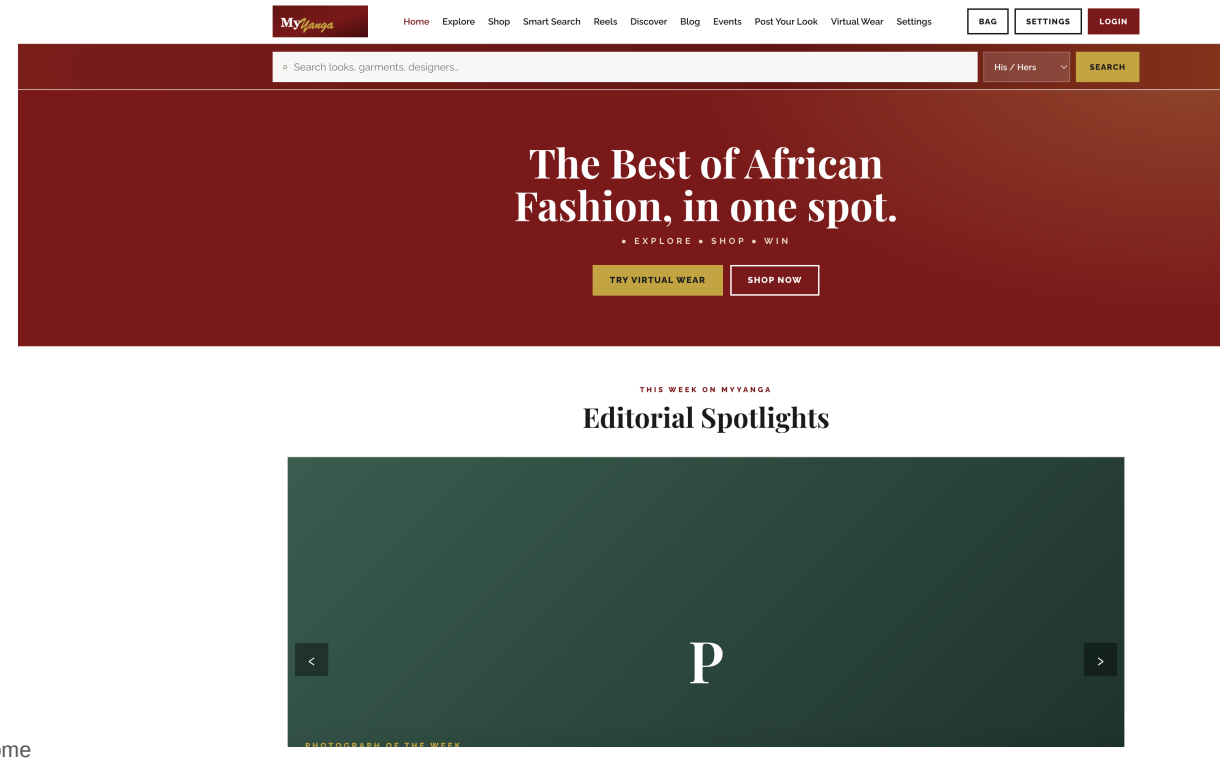

The best of African fashion creativity, in one spot.

Prepared for ZonicMe Limited - Abuja - Lagos - Diaspora - July 2026 Confidential - pre-production handoff companion to MYYANGA_V4_CAPABILITIES.md

1. Executive summary

MyYanga is a **trust-first African fashion marketplace and discovery portal**. Members discover African creatives, try garments virtually from a paid brand pool, receive curated fashion reels on a schedule they control, and patronize designers directly - while MyYanga never holds retail purchase funds. Brands pay for promotion seats (Discover + Virtual Wear rotation) and e-vetting unlocks cart settlement via gateway subaccount split.

Version 4 is pre-production-ready: monetizable end-to-end, Google-default auth with founding super-admin claim, Testing-mode Admin Studio for QA, and fail-soft Google / Gemini / reel channels for AWS deployment.

Home

2. Market analysis

2.1 Demand drivers

Driver	Implication for MyYanga
Rising African middle class + diaspora spend on cultural fashion	Need for a single portal that feels premium, not classifieds
Distrust of informal Instagram commerce	E-vetting (CAC) + gateway settlement builds trust without MyYanga becoming merchant of record
Smartphone-first Africa	Mobile-solid SPA; WhatsApp OTP; reel delivery on member schedule

See before you buy expectation (global fashion tech)	Virtual Wear paid pool + Gemini AI with canvas fallback
Creator economy pressure on designers	Equal promotion seats when paid; Insights / Orbit analytics path

2.2 Addressable segments

- **Fashion lovers (B2C)** - Nigeria, Ghana, Kenya, South Africa + UK / US / Canada diaspora seeking authentic African fashion for weddings, owambe, corporate, and daily wear.
- **African creatives / brands (B2B)** - Designers, fabric makers, photographers, makeup artists seeking discovery, credibility, and direct patronage.
- **Platform operator (ZonicMe)** - Monetizes promotion, feature gates, commission at gateway, and future Orbit reporting.

2.3 Competitive / trust-platform angle

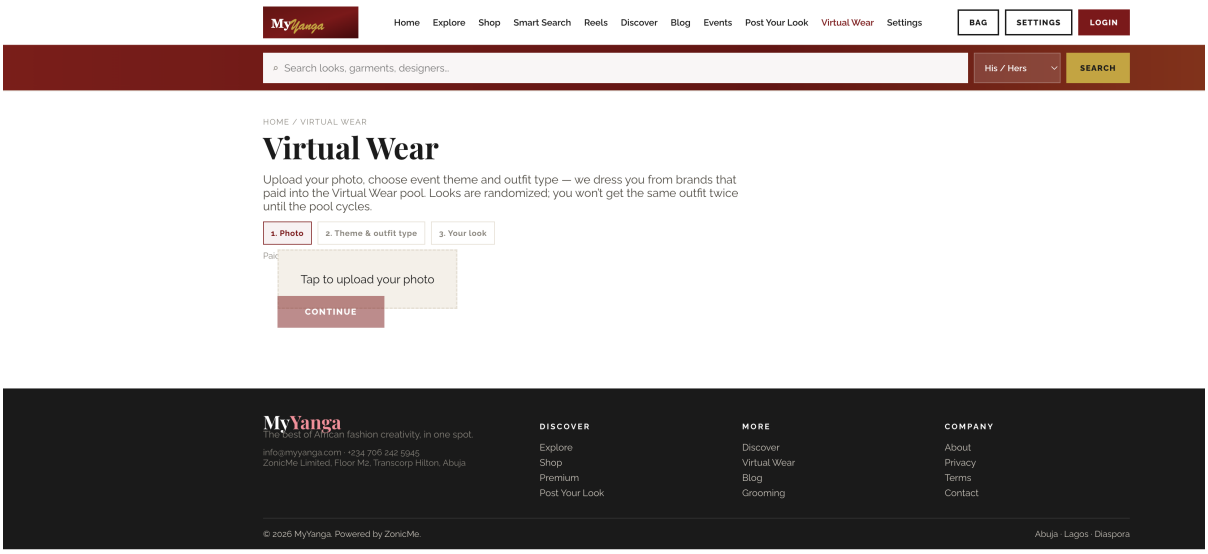

MyYanga is **not** another multi-vendor warehouse. Positioning:

Alternative	Gap MyYanga closes
Instagram / WhatsApp DMs	No e-vetting, no Virtual Wear pool fairness, no member-controlled reel clock
Global marketplaces	Weak African creative curation; high take-rate; diaspora sizing friction
Pure social fashion apps	Weak monetization for brands; no CAC trust layer
Traditional e-commerce	MyYangas **trust platform**: funds settle to designers via Flutterwave/Paystack split; commission at gateway

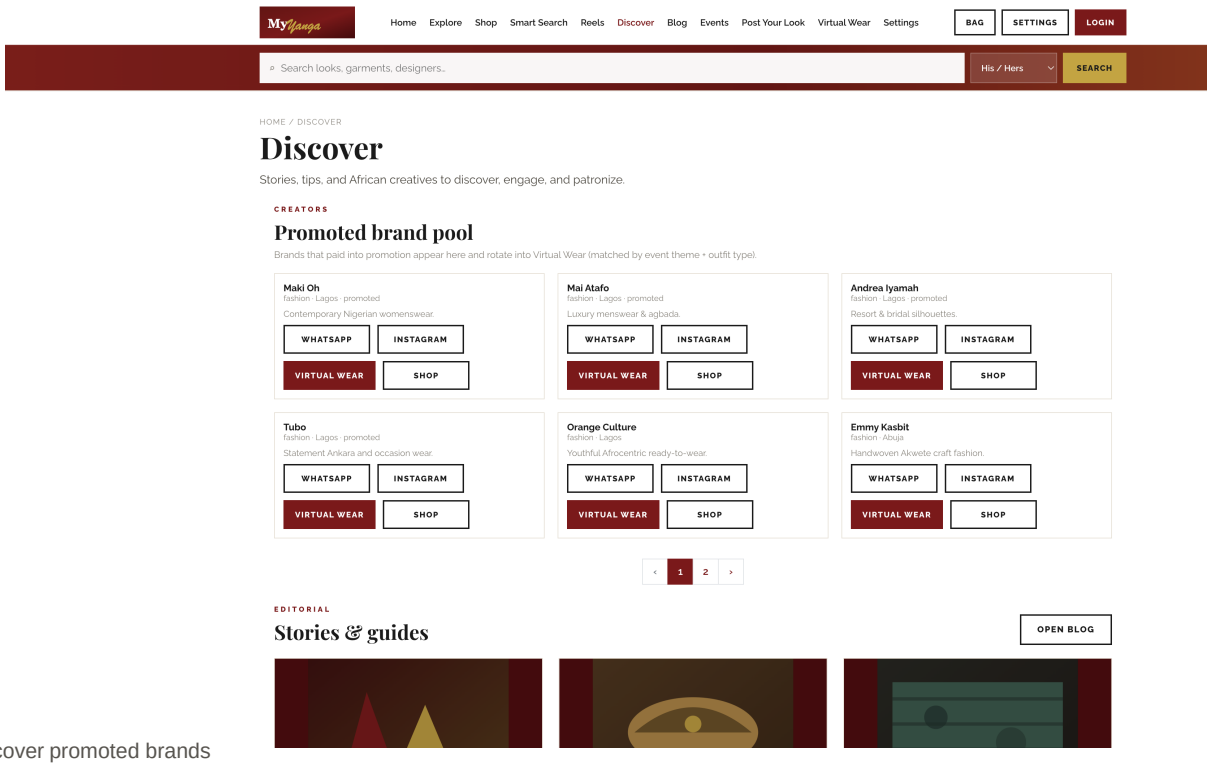

Trust narrative for marketing and investor decks: *We verify brands, rotate paid looks fairly, and never sit on the customers bag total.*

3. Product positioning

Category: Creative commerce + fashion discovery (Africa + diaspora) **Brand voice:** Maroon-gold-cream, Playfair / Raleway - editorial, not purple AI kitsch. **Hero promise:** Discover - Engage - Patronize - see yourself in the fashion before you buy.

Virtual Wear

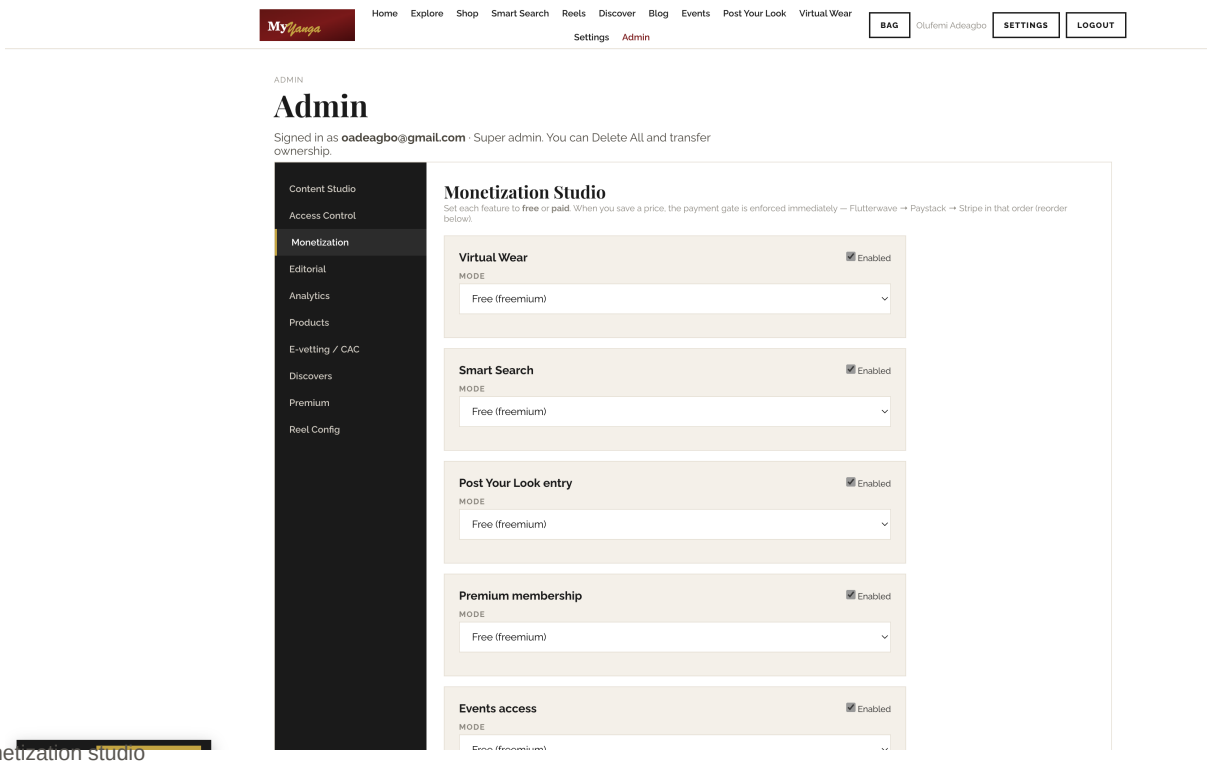

Discover promoted brands

4. Monetization model

Stream	Mechanism	Notes
Promotion seats	creator_promotion gate -> is_promoted	Feeds Discover + Virtual Wear paid pool
VW pool inventory	Brands fund looks members rotate through	Fair no-repeat until pool cycles; Gemini cost pass-through guidance (~NGN 125k / 1k AI renders)

Feature gates	virtual_wear, smart_search, pyl_entry, premium, events	Admin Monetization Studio sets free/paid
Retail commission	Flutterwave multi-subaccount / Paystack	Split at gateway; e-vet required for Add to Bag
Orbit / Insights	Anonymized analytics -> brand packs	Privacy-safe; monetize reporting later

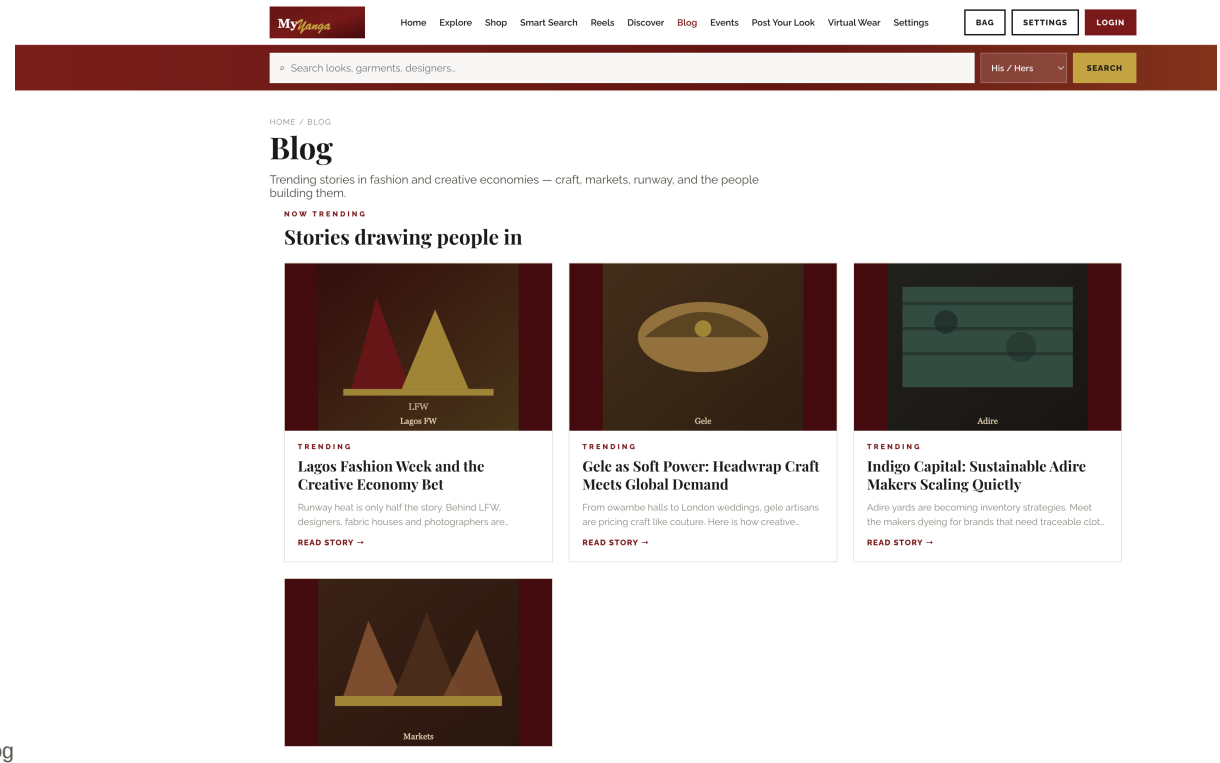

Monetization Studio

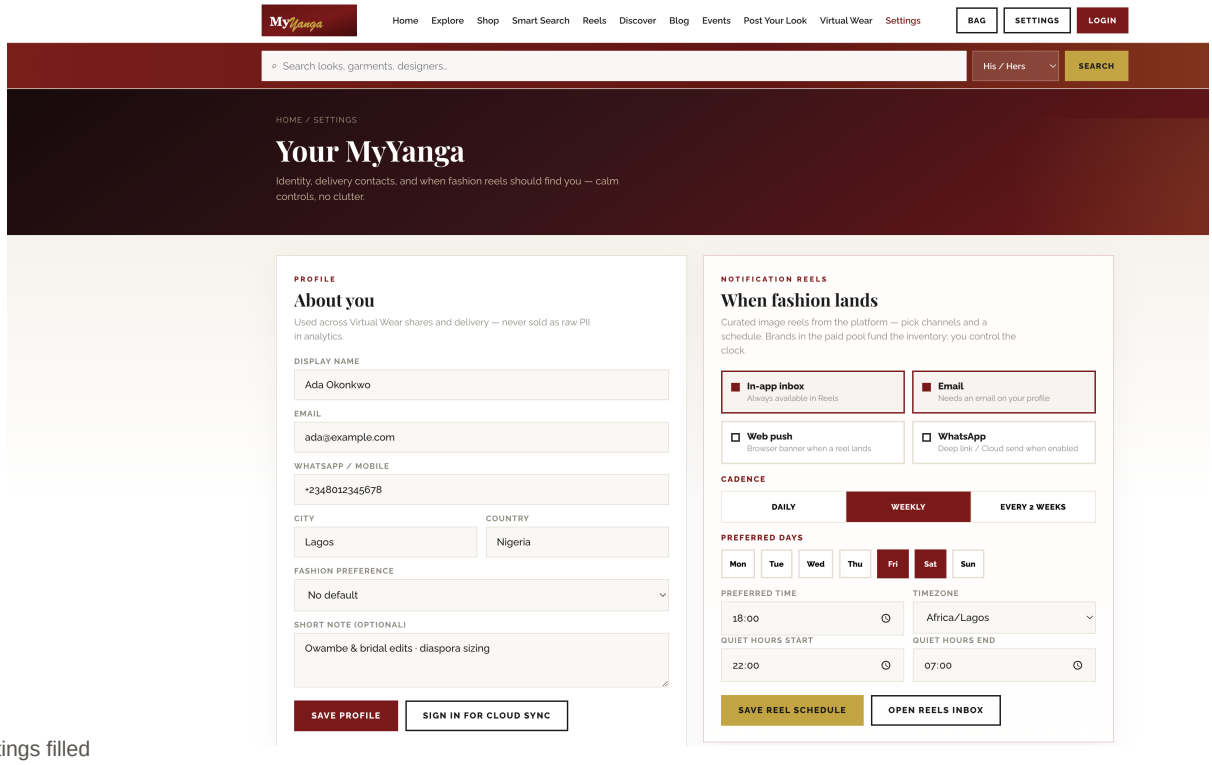

5. Marketing plan

5.1 Pillars

- **Trust** - CAC e-vetting stories; we dont hold your money.
- **See yourself** - Virtual Wear UGC + shareable looks.
- **Member clock** - Reels on *your* schedule (Settings), not spam.
- **Creative economy** - Blog as acquisition funnel (LFW, indigo, gele, studio stories).

Blog

Settings filled

5.2 Channels

Channel	Tactic
WhatsApp	OTP login, reel deep-links (wa.me), brand patronage buttons
Instagram	Creative Focus editorial; look shares

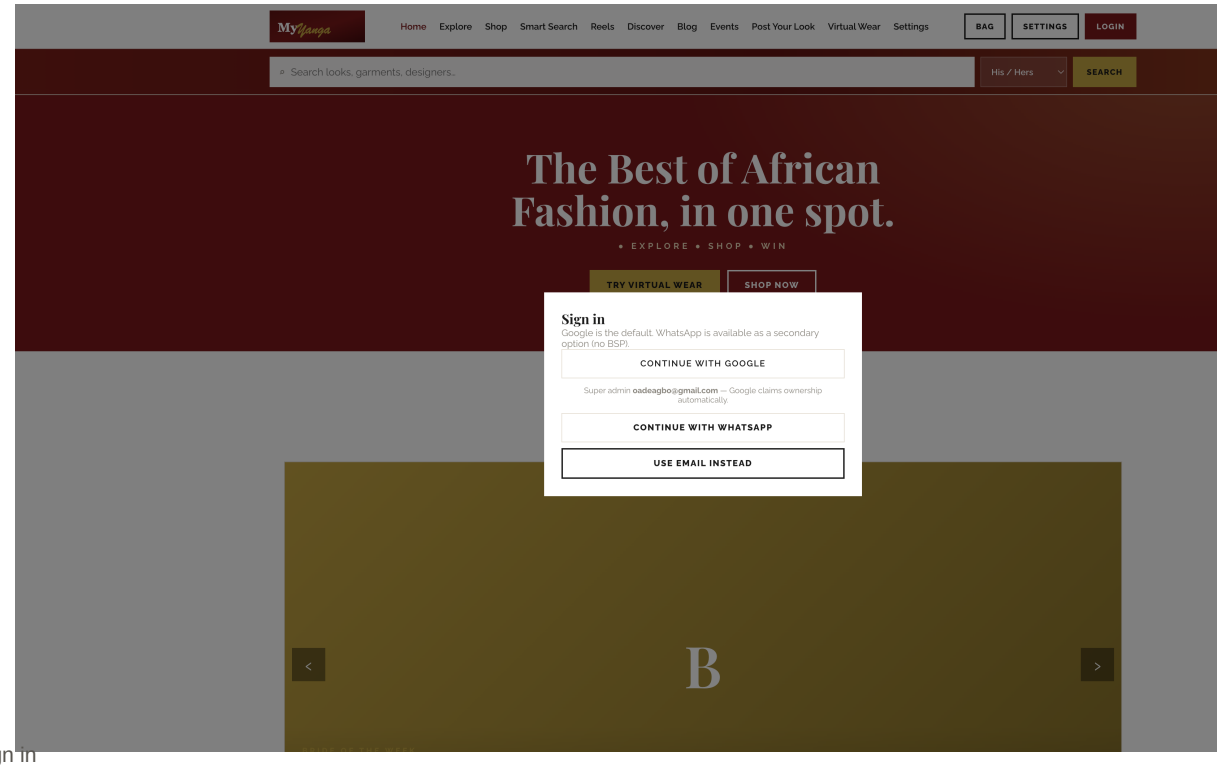

Email / push	Resend + VAPID when secrets set; always in-app inbox
Events	Fashion week / owambe partnerships; gated event tickets
Diaspora	London / NYC timezone defaults in Settings; UK-NG shipping narrative in Blog

5.3 Go-to-market - Africa + diaspora

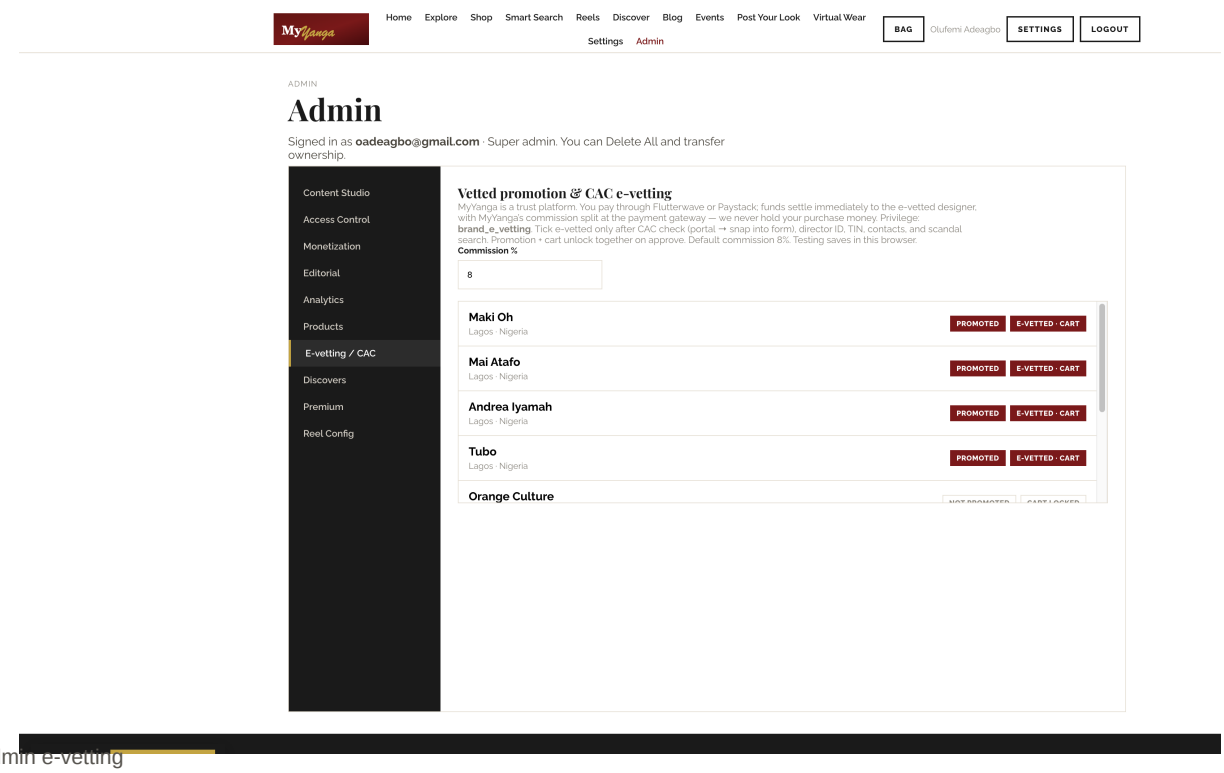

Phase A (pre-prod / soft launch): Abuja-Lagos creatives e-vetted; Testing Admin Studio for partners; Google founding owner live. **Phase B (city beachheads):** Lagos Fashion Week adjacent content; Accra / Johannesburg expansion via Discover countries. **Phase C (diaspora):** London & NYC timezone reels; Premium membership for early drops; Orbit brand reports sold to promoted pool.

6. Operating model

- **Testing mode:** Testers auto-receive Admin Studio rights for QA; rights revoke in Production.
- **Founding super admin:** oadeagbo@gmail.com via Google OAuth + claim_founding_owner.
- **Secrets / AWS:** See docs/AWS_SECRETS_RUNBOOK.md - Google OAuth, Gemini, Resend, WhatsApp Cloud (no BSP), payment keys.

Sign in

Admin e-vetting

7. Risks & mitigations

Risk	Mitigation
Gemini cost at scale	Canvas fallback; pass-through pricing to VW pool brands
WhatsApp Cloud / BSP confusion	Documented no-BSP Cloud path; dedicated SIM for Meta registration only
Trust failure (fake brands)	CAC snap + scandals cleared + subaccount before cart unlock
Attention fatigue	Member-owned reel schedule + quiet hours

8. Success metrics (12 months post-launch)

- Promoted brands in VW pool with 1 paid seat
- E-vetted brands with live Flutterwave subaccounts
- Virtual Wear render completion rate (AI + canvas)
- Reel open rate by channel (in-app primary)
- GMV settled via gateway split (not held by MyYanga)
- Blog -> Explore conversion

9. Closing

MyYanga v4 packages product, monetization, and trust into a deployable SPA + Supabase stack. The business thesis is durable: **African creative discovery with member-controlled attention and brand-funded inventory, settled without MyYanga holding the bag.**
